4. RESEARCH GAPS

5. OBJECTIVES

6. MODULE IDENTIFICATION

- << • Identify key modules/subsystems
- • Define functionality of each module
- • Show module interaction
- FONT TIMES NEW ROMAN SIZE 24>>

7. SYSTEM ARCHITECTURE

- << • Overall architecture diagram
- • Data flow between modules
- • Technology stack used TEXT FONT TIMES NEW ROMAN>>

8. DEVELOPMENT & INTEGRATION

- << • Implementation of modules
- • Integration strategy
- • Challenges faced and solutions

FONT TIMES NEW ROMAN>>

9. PROTOTYPE / RESEARCH FRAMEWORK

- << • Working prototype description
 - OR
 - • Research framework setup
- FONT TIMES NEW ROMAN>>

10. OUTCOME

- << • Working model screenshots/results
- OR
- • Data classification & analysis
- • Key insights/results

FONT TIMES NEW ROMAN>>

11. RESULTS

- << • Performance metrics
- • Observations
- • Validation of approach
- FONT TIMES NEW ROMAN>>

12. TIMELINE / GANTT CHART

- Planned vs completed tasks
- Next milestones

Abstract

Impact analysis is an essential part of change management. Without adequate analysis it is not possible to confidently determine the extent, complexity and cost of proposed changes to a software system. This diminishes the ability of a developer or maintainer to make informed decisions regarding the inclusion or rejection of proposed changes. The lack of coherent impact analysis can also hinder the process of ensuring that all system components affected by a change are updated. The abstract nature of requirement level
